PlastiVation offers plastics processors efficient production solutions for manufacturing value-added products

- ✓ Tederic NEO series offers precisely tailored properties for numerous injection moulding applications
- ✓ Personal advice from experienced sales and service team
- ✓ Munich-based start-up looks ahead to 2022 with confidence after successful market entry

(Munich, December 7, 2021) PlastiVation Machinery GmbH has positioned itself to distribute the Tederic NEO series injection moulding machines in Germany. The Munich-based start-up offers owner-managed and medium-sized plastics processors efficient production solutions for manufacturing valuable products on stable-running injection moulding machines in line with specific applications.

High-end injection moulding machines for numerous applications

"In Tederic, we have gained a partner that also offers the right performance characteristics for numerous injection molding applications, particularly with its NEO series electric injection molding machines: Flexible, functional and with simple operator guidance. All this at low cost, stable and reliable," explains Bengt Schmidt, founder and CEO of PlastiVation Machinery GmbH. Owner-operated and medium-sized plastics processors can use the four product lines of the Tederic NEO series - NEO-T, NEO-H, NEO-E and NEO-M - to strengthen their market position and their value chain, optimize their production, avoid downtime, and produce valuable products for their customers.

"At the beginning of 2022, our sales team will be complete and available to our customers for personal and individual advice," emphasizes Schmidt. The four product lines can be used to manufacture high-end products for applications in the automotive, packaging, medical, logistics and construction industries, as well as for household and consumer goods. The Tederic NEO series will be on show live next year in May at the Kuteno Nord trade show and at K 2022.

Confident outlook for 2022

Following the successful market entry and organization phase in Germany this year, Schmidt is looking ahead to 2022 with confidence. "The cooperation with Tederic is built on a strong foundation. Internal processes were consistently digitized from the very beginning. Furthermore, the feedback from owner-managed and medium-sized plastics producers has been very positive." The company places great emphasis on 'customer care' and offers extensive services with repair, maintenance and servicing. In addition, customers receive application technology support in the 800sqm application center in Munich, from process engineering to on-site machine optimization. "Our experienced team of experts knows almost all production, application and control processes inside out. Moreover, Dr. Daniel Ammer has been on board as Vice President Research & Development since December 1, 2021 and will drive our ambitious 'Hurricane' project in the coming years. The development of a high-performance injection molding machine series enabling customers to manage their plastics production digitally, efficiently and smart supporting them to create added value in their segment on an application-specific basis," concludes Schmidt.

About PlastiVation Machinery GmbH:

PlastiVation Machinery GmbH was founded in 2021 in Munich (Germany) by Bengt Schmidt. The entrepreneur and businessman has held numerous management positions over more than 20 years with an international industry and technology leader in the plastics and rubber industry. The business model of the start-up is unique for the industry and is based on two pillars: A distributor with its own mechanical engineering. As the exclusive distributor for Germany, PlastiVation distributes the Tederic NEO series injection moulding machines with a strong and experienced team of experts and offers comprehensive service and application support. At the same time, the company is pursuing the ambitious goal of developing its own injection moulding machine series in the coming years: The 'Hurricane' will be the most powerful machine on the market for a specific application. All this supports the company's vision: to make plastics production digital and electric with a unique business model.
